

PIPELIFE ECO-DUO PRODUCT DECLARATION

Pipelife Ireland Limited hereby declares that the hyper-flexible 'Pipelife Eco-DUO Product' either matches, or surpasses, all other equivalent non-bonded pre-insulated pipe solutions in the marketplace, in terms of insulation characteristics / heat loss minimization.

The multi-layer, cross-linked, hydrofobe closed cell micro cellular foam insulation, with a lambda value of 0.036 W/mK, is manufactured and tested to the highest industry standards, and in conformity with the European norm EN15632-1. Furthermore, the enhanced insulation properties of the 'Pipelife Eco-DUO Product' have the added benefit that the pipes are encapsulated in a reduced double walled outer casing of 110mm diameter, thus improving the handling of the product in service, compared to other similar products on the market, that utilize a larger outer casing.

Both the manufacturing of the pipe, and the production of the insulation, as well as the subsequent application of the insulation to the pipe, are performed in fully ISO9001:2015 certified manufacturing operations.
